

PACIFIC PROTECTIVE GROWTH PERFORMANCE MIX CREDITING STRATEGY

Growth and Protection

Pacific Protective Growth is a registered index-linked annuity contract that offers growth opportunities, including crediting strategies tied to the performance of an index, while providing a level of protection against the amount of loss you may incur. You do not invest directly in the market.

The **Performance Mix crediting strategy** calculates the weighted average of returns from three indexes. Interest is determined according to the following weights: **50%** for the highest-performing index, **30%** for the second-highest-performing index, and **20%** for the third-highest-performing index. The weighted average will be used with a participation rate (a percentage that determines how much of the index return is credited) to determine the interest that will be applied.

Market Indexes¹

used in this crediting strategy

S&P 500[®] Index

Composed of 500 equity securities of large-cap U.S. companies.

iShares[®] Russell 2000 ETF

Seeks to track the investment results of an index composed of small-cap U.S. equities.

MSCI EAFE[®] Index

Tracks the performance of large- and mid-cap companies across 21 developed markets around the world (excluding the U.S. and Canada).

Protection Level

if index returns are negative

A **buffer** protects against the first **10%** of negative return generated by the Performance Mix crediting strategy. A negative return that exceeds the 10% buffer will reduce your contract value by the excess percentage.

Term

This crediting strategy has a **6-year term** over which index performance is measured. The participation rate is guaranteed for the initial 6-year term. At the end of the term, you can reallocate into a new term or choose a different crediting strategy. To reallocate into another 6-year term in any crediting strategy, you must elect to renew the market value adjustment (MVA).²

Why Consider the Performance Mix Crediting Strategy?

The Performance Mix crediting strategy uses indexes that represent diverse market sectors that generally don't overlap, providing exposure to different market segments. Talk to your financial professional about this crediting strategy if you:

- Want to take advantage of the performance of three diverse indexes instead of having to predict which index might perform best.
- Like that the allocation of returns will always be more heavily weighted to the highest-performing index.
- Appreciate having the first 10% of the loss covered by the buffer protection.

A registered index-linked annuity is an insurance contract and is subject to investment risk; its value will fluctuate, and loss of principal is possible. The indexes are unmanaged and not available for direct investment. The index performance does not include the reinvestment of dividends.

¹When allocating to an index that is linked to the performance of an ETF, that is not an investment in the ETF. Index-based ETFs seek to track the investment results of a specific market index. Due to a variety of factors, including the fees and expenses associated with an ETF, an ETF's performance may not fully replicate or may, in certain circumstances, diverge significantly from the performance of the underlying index.

²An MVA is a positive or negative adjustment to amounts withdrawn that exceed the 10% free withdrawal amount during any MVA term. The MVA reflects changes in market interest rates and automatically applies during the first six contract years. At the end of an MVA term, you may renew the MVA. The MVA term for renewals runs in 6-year increments. If you do not renew, only 1-year crediting strategy terms will be available going forward. For more information about the MVA, please see the prospectus.

How It Works

The following hypothetical examples show how the Performance Mix crediting strategy works in both positive and negative markets.¹ Any interest earned or losses incurred are applied at the end of the 6-year term.

Upside Opportunities

The three indexes each contribute to the final interest credited over the 6-year term. The example below assumes a hypothetical 100% participation rate and uses **50%** of the highest index return, **30%** of the second-highest index return, and **20%** of the third-highest index return.

Performance Lock

The Performance Lock feature provides the ability to lock in the value of a crediting strategy between the start and end of a term. After lock-in, you earn a fixed rate of interest on that value, called the “interim value,” until the next contract anniversary. You can do this only once during a term and only after the first 60 days of the term. With Performance Lock, you could potentially lock in a value that, along with interest credited, exceeds what the crediting strategy rates would have provided at the end of the term. However, there is no guarantee the locked-in value will prove favorable. After lock-in, the rates and loss protection of the crediting strategy will no longer apply.²

Downside Protection

The example below assumes the 10% buffer and the same index weights as above: **50%**, **30%**, and **20%**, respectively, for highest, second-highest, and third-highest index returns. With a buffer, your contract value is reduced by the amount of loss that exceeds the buffer percentage.

In a steep index loss situation, there is substantial risk of loss beyond the buffer.

¹The hypothetical examples are intended for illustrative purposes only and assume that an optional benefit is not elected, no withdrawals are taken, and that the contract was held to full term. They are not intended to predict your index or strategy returns and are not indicative of actual market, index, or financial product performance. Participation rates may be higher or lower than the initial rates but will never be less than the guaranteed minimum rates. Subsequent rates may differ from the rates used for new contracts or for other contracts issued at different times. The crediting strategy illustrated uses a point-to-point crediting approach, which means the index price on the term start date is compared to the index price on the term end date to determine the index return.

²If the Performance Lock feature is elected, there will be no interest credit or protection of the buffer or floor to mitigate any loss at the end of that term. If Performance Lock is used to lock in an interim value that is lower than the investment base on the term start date, a loss could be locked in. Contact us at our Service Center to obtain interim value(s) for any allocated index-linked option. However, Pacific Life has no ability to determine the interim value that will be locked in prior to the Performance Lock request. Once Performance Lock is exercised, it cannot be changed and the locked-in amount cannot be transferred to a new crediting strategy until the next contract anniversary.

IMPORTANT DISCLOSURES: Annuities are long-term contracts designed for retirement. Annuity withdrawals and other distributions of taxable amounts, including death benefit payouts, will be subject to ordinary income tax. For nonqualified contracts, an additional 3.8% federal tax may apply on net investment income. If withdrawals and other distributions are taken prior to age 59½, an additional 10% federal income tax may apply. A withdrawal charge and a market value adjustment (MVA) also may apply. Withdrawals will reduce the contract value and the value of the death benefit, and also may reduce the value of any optional benefits.

An investment in a crediting strategy is subject to risks, including the possible loss of all or a significant portion of your principal investment and any credited contract earnings. This loss could be greater if you take a withdrawal or surrender your contract due to the imposition of withdrawal charges, a market value adjustment, if applicable, and possible negative tax consequences.

The crediting strategy or protection level are not applied until the end of the term. Before the end of a term, if the contract is surrendered or annuitized, a withdrawal is taken, or if the death benefit is paid, the transaction will reduce the interim value of the investment in that crediting option and could result in the loss of principal and previously credited contract earnings. Such losses could be as high as 100%. The interim value is the amount in the crediting option that is available for transactions that occur during the term, including full surrenders, withdrawals, free withdrawal amounts, and pre-authorized withdrawals, optional charges, guaranteed withdrawal amounts under the guaranteed lifetime withdrawal benefit, death benefit payments, and annuitization. The interim value could be less than the investment in the crediting strategy option even if the index is performing positively.

Not all products, crediting strategies, indexes, or optional benefits are available in all states or at all firms.

We reserve the right to add or remove crediting strategies and indexes. We may change the crediting strategy rates and buffer/floor rates subject to the stated guaranteed minimum or maximum rates. There is no guarantee that a particular crediting strategy or index will be available during the entire time that you own your annuity. A crediting strategy that is currently available may not be available for transfers from other crediting strategy options or reallocations of contract value into the same crediting strategy at the end of a term or may be closed to new contract issues. The 1-year S&P 500® with Cap and 10% Buffer index-linked option, in addition to the fixed account option, will always be available under your contract. With advance notice, we may discontinue, suspend or change offerings and contributions/transfers, or make other changes in contribution and transfer requirements and limitations.

Insurance product and rider guarantees, including optional benefits and any fixed crediting rates or annuity payout rates, are backed by the financial strength and claims-paying ability of the issuing insurance company. They are not backed by the independent third party from which this annuity is purchased, including the broker/dealer, by the insurance agency from which this annuity is purchased, or any affiliates of those entities, and none makes any representations or guarantees regarding the claims-paying ability of the issuing insurance company.

Pacific Life Insurance Company is licensed to issue insurance products in all states except New York.

Securities are distributed by **Pacific Select Distributors, LLC** (member FINRA & SIPC), a subsidiary of Pacific Life Insurance Company. Product/material availability and features may vary by state.

The home office for Pacific Life Insurance Company is located in Omaha, Nebraska.
